

*We are an international architectural practice based in London, UK, with registered architects home and abroad. As preferred suppliers to the LDA (London Diplomatic Association) and with Chartered Members of the Royal Institute of British Architects (RIBA), Display Architecture has the resources and experience to undertake international projects of varying sizes.*

*Whilst our approach often takes the form of many guises, in a variety of architectural fields, our strength as well as passion, lies within the realm of high-end environmental homes, designed alongside the end user/client.*

*Via the analytical use of in-house software, we are able to evaluate the vast potential of a site's environmental characteristics by identifying sunlight, acoustics, wind etc. These environmental variables are then embraced by our design team, to create an efficient form, which responds to its use as well as its surroundings. Sustainable materials as well as active systems such as geothermal heating, photovoltaics, rainwater harvesting are identified as appropriate sources from our initial analysis, reducing the project's carbon emissions. This creative approach, due to its energy efficiency, enables a more adventurous and diverse scheme to be permitted, when perhaps a standard approach may have been refused. (Rainwater harvesting can permit multiple bathrooms whilst addressing issues of onsite water consumption)*
